

## Speed Measurement Device SPS-5M

- Applied to vehicle pedestrian safety test and moving object speed measurement;
- Max. measurement speed 99.999km/h;
- Double lasers measurement distance is only 80mm;
- Support wireless or button operation;
- 9~18VDC power supply (UPS battery inside);
- Ethernet / Wi-Fi communication;
- LED speed result and status display.

Speed Measurement Device SPS-5M, by two groups of high-speed laser sensors of front and rear installed in opposite direction, can detect the time difference of the object passing through the two sets of laser sensors. So that the speed can be calculated because the length is constant. The result can display by internal LED or external LED, and even remote PC.

### Specification:

Name	unit	Value
Meas. Range	km/h	$\pm 99.999$
Resolution	km/h	0.001
Accuracy	km/h	$\pm 0.07 (<50)$ $\pm 0.15(50\sim100)$
Power	V	9~18
Consumption	W	<50
Meas. Length	mm	80
Rec/Send Distance	m	3~8
Opera. Temp.	°C	0~40
Trigger Out	2 channels for Switch or TTL	
Calibration	1 channel Clock PWM output	
Button	/	Power Reset
Others		Battery inside Working $\geq 8$ hours
Materials	/	Al. Alloy

Power Adapter is supplied for 100~250VAC.

### LED status indicate:

----	Waiting for Meas.
.....	Position Error
HHHHH	Out of Range
Value	Result
No Display	Power Error

### Mounting Types (Any angle is adjustable):
